AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A method for displaying a message in a folder-type mobile terminal including a main body, a sub-body foldably mounted to the main body, said sub-body having a first display mounted on an outer side and a second display mounted on an inner side thereof, the method comprising:

upon receipt of a message, while the sub-body is folded to the main body, displaying an indicator indicating receipt of the message on the first display; and

at a user's external display request, slidingly displaying the received message on the first display,

wherein the received message is slidingly displayed by shifting the received message by a predetermined number of bytes each millisecond.

2. (Original) The method as claimed in claim 1, wherein the user's external display request is received by pressing a key mounted on an outside of the folder-type mobile terminal.

3. (Cancelled)

4. (Original) The method as claimed in claim 1, further comprising displaying initial information selected from the group consisting of a RSSI bar, a battery icon, a date, a day and a current time on the first display at a user's external display release request.

5. (Original) The method as claimed in claim 4, wherein the user's external display release request is received by pressing a key mounted on an outside of the folder-type mobile terminal.

6. (Previously presented) The method as claimed in claim 1, further comprising displaying a message received time and a caller's phone number, following the received message, on the first display.

7. (Currently Amended) A method for displaying a message in a folder-type mobile terminal including a main body, a sub-body foldably mounted to the main body, said sub-body having a first display mounted on an outer side and a second display mounted on an inner side thereof, the method comprising:

upon receipt of a message, while the sub-body is folded, displaying an indicator indicating receipt of the message on the first display; and

upon receipt of a key input corresponding to a user's external display request, slidingly displaying the received message on a first line of the first display and fixedly displaying a message received time and a caller's phone number on a second line of the first display,

<u>wherein the received message is slidingly displayed by shifting the received message by a predetermined number of bytes each millisecond</u>.

8. (Currently Amended) A method for displaying a message in a folder-type mobile terminal including a main body, a sub-body foldably mounted to the main body, said sub-body having a first display mounted on an outer side and a second display mounted on an inner side thereof, the method comprising:

upon receipt of a message, while the sub-body is folded, displaying an indicator indicating receipt of the message on the first display;

upon receipt of a key input corresponding to a user's external display request, determining whether the first display is set to a double-line display mode;

if the first display is set to the double-line display mode, <u>slidingly</u> displaying the received message on a first line of the first display and fixedly displaying a message received time and a caller's phone number on a second line of the first display; and

if the first display is not set to the double-line display mode, <u>slidingly</u> displaying the received message<u>, the message received time, and the caller's phone number on a single line</u> on the first display.

9. (Cancelled)
